

Joint rescue training was held with the Akita Coast Guard and Akita City Fire Department at Akita offshore wind farm project !

2023/7/5

Marubeni Offshore Wind Development Co., Ltd.

On Wednesday 5th July 2023, a joint rescue training was held with the Akita Coast Guard Department and Akita City Fire Department at the Akita Port site in Akita Offshore Wind Co., Ltd. We are making daily efforts to build a safety system by holding voluntary training at offshore installation sites, etc., and have been discussing with the Akita Coast Guard Department and Akita City Fire Department on how to support emergency situations. This time the joint training was held as part of that.

This training was held considering a situation of rescuing a worker who collapsed during maintenance work in offshore site. A helicopter rescuer from the Japan Coast Guard landed on the access ship, and then transferred to offshore site together with firefighters. The stretcher carrying the worker was lowered onto the access vessel, then it was hoisted onto a helicopter and transported. Our company was responsible for the crane work when unloading the stretcher from the offshore site to the access ship and the navigation support of the access ship. This will be the first rescue training in Japan which collaborated with the Japan Coast Guard at an offshore wind farm.

We will continue to cooperate with related parties and strive for stable business operations with safety first.
