Marubeni Offshore Wind Development Corporation

On June 22, 2025, we held a tour of the Red Star vessel at the Global Wind Day in Noshiro City, Akita Prefecture, with many local residents participating.

Local residents including children, boarded the "Red Star" an essential work vessel for offshore wind farm maintenance, toured the ship, received explanations about offshore operations, and showed great interest as they sat in the helm with the sea stretching before them and interacted with the equipment.

This was a valuable opportunity for participants to feel closer to and deepen their understanding of offshore wind power. We will continue to strive for environmental education and community contributions so that our business remains beloved by the local community.
