

## Tour of the “Red Star” Crew Transfer Vessel (CTV) at the 2026 Global Wind Day in Noshiro!

26th June, 2026

Marubeni Offshore Wind Development Corporation

On 21<sup>st</sup> June 2026, Marubeni Offshore Wind Development (MOWD) held a tour of the Red Star Vessel at the Global Wind Day in Noshiro City, Akita Prefecture, with many local residents and visitors participating.

Despite the rainy weather, participants from both the local community and across Japan had the opportunity to board the Red Star, an essential vessel used in the maintenance of the offshore wind farm. During the tour, visitors watched demonstrations of the vessel's communication equipment, learned about offshore maintenance activities, including climbing 24-metre ladders on the WTGs and experienced the view from the bridge while sitting in the captain's seat. Many also enjoyed interacting with the onboard equipment and learning more about the vessel's role in offshore operations.

The tour provided a valuable opportunity for participants to gain a closer understanding of offshore wind power and the work involved in maintaining the offshore wind farms. MOWD remains committed to promoting environmental education and contributing to the local community, helping to foster greater understanding and support for renewable energy.
