

Joint rescue drill with Japan Coast Guard and Akita City Fire Department
~Enhancing Emergency Response Capabilities and Strengthening Coordination
among Relevant Organizations at Akita Port Offshore Wind Farm~

October 21st, 2026

Marubeni Offshore Wind Development Corporation

Marubeni Offshore Wind Development Corporation conducted a joint rescue drill on Tuesday, October 6, 2026, at the Akita Port Offshore Wind Farm and in the surrounding waters in cooperation with the Sendai Air Station of the Japan Coast Guard's 2nd Regional Coast Guard Headquarters, the Akita Coast Guard Office, the Akita City Fire Department, and Akita Offshore Wind Corporation.

During the drill, we confirmed the effectiveness of a series of rescue activities, including the transfer of personnel and equipment using a crew transfer vessel (CTV), rescue operations by fire department personnel inside the transition piece at the base of the wind turbine, approaches from the sea surface by Japan Coast Guard Mobile Rescue Technicians, and stretcher transport of simulated casualties. Separately, the Japan Coast Guard also conducted a helicopter hoisting exercise.

As a company involved in the operation and management of the offshore wind farms at Akita Port and Noshiro Port, we recognize the importance of smooth coordination with relevant agencies during emergencies. We will continue to prioritize safety and conduct practical drills with the fire department, the Japan Coast Guard, and other relevant agencies to verify our offshore emergency response framework and strengthen coordination.
